

Modular 9-Wavelength Red Light Therapy Bed

FDA Listed | 3-Year Warranty | \$30,000

Product Overview

The Prestige Hyperbaric Modular Red Light Therapy Bed is a clinical-grade photobiomodulation system engineered for recovery centers, regenerative clinics, and advanced wellness facilities. Unlike fixed clamshell beds, this system features a true modular two-piece architecture allowing the upper panel to separate, adjust in height, rotate vertically, or position over a traditional treatment table or sleeping bed.

With 2,304 dual-chip LEDs and approximately 3,300 watts of combined output, this system delivers high irradiance across nine therapeutic wavelengths. Industrial iron housing and commercial-grade components ensure durability for high-volume daily clinical use.

FDA Listed for cleared indications include temporary relief of minor muscle and joint pain, increased local circulation, reduction of inflammation, adjunctive therapy for chronic pain, and relaxation of muscle tissue.

Why the Modular Design Matters

- Upper panel separates for flexible deployment
- Vertical configuration for standing protocols
- Adjustable height for seated positioning
- Can be positioned over existing treatment beds
- Operate top and bottom independently
- Multiple revenue applications from a single system

Technical Specifications

Feature	Details
Total LEDs	2,304 Dual-Chip LEDs (1,152 per panel)
Total Power Output	~3,300W Combined (1,650W per panel)
Wavelengths	480, 590/599, 630, 660, 670, 810, 830, 850, 1060nm
Irradiance	Up to 1400 W/m ² @ 6 inches
Pulse Control	Independent 1-10,000 Hz per wavelength
Brightness Control	1-100% per wavelength
Control Interface	Touchscreen + 2.4G Remote + Bluetooth App
Voltage	100-240V Universal
Construction	Industrial Iron Housing
Warranty	3 Years
Regulatory	FDA Listed
